**REPERTÓRIO CLÍNICO**  
**(POR PATOLOGIAS)**

**[WWW.HOMEOESP.ORG](http://WWW.HOMEOESP.ORG)**

## INTRODUÇÃO

Um **repertório homeopático** é em essência uma compilação de determinados elementos, dispostos de modo – *normalmente alfabético e por capítulos com especificidades próprias* – a que possam ser localizados com a facilidade possível.

O Repertório Homeopático “é um índice de sintomas colectados a partir de registos toxicológicos, experimentações em indivíduos sãos e curas na prática clínica, que são reproduzidos e artisticamente arranjados de uma forma prática, auxiliando-nos a encontrar o sintoma requerido conjuntamente ao medicamento ou grupo deles, os quais são citados em diferentes graus, com o intuito final de facilitar a rápida selecção do *simillimum*”.

Estão neste caso, os Repertórios de Boenninghausen, de Kent, Barthel, Kunzli, Aldo Farias Dias, Favilla, Ariovaldo, entre muitos outros – *vejam-se neste site o Repertório Prático de Sintomas Homeopáticos e o Repertório Prático de Sintomas Gerais Homeopáticos.*

No entanto, cedo surgiram os denominados *Repertórios Clínicos*, os mais criticáveis na perspectiva hahnemanniana por prosseguirem de forma simplista a escolha do medicamento, associando determinados medicamentos a certas patologias – *independentemente das críticas que lhes são assacadas, deveremos destacar pela perfeição possível, os de Boericke e de Clarke.*

Num repertório clínico de características gerais, como o que a seguir se apresenta – *que mais se assemelha a um índice terapêutico* –, os medicamentos devem estar descritos, em conformidade com a experiência e uso, em função dos que mais podem convir ao tratamento das patologias enunciadas.

Este tipo de repertórios, para poderem ter uma eficácia maximizada, devem ser reportados a matérias médicas específicas. No nosso caso, optámos essencialmente por duas obras consagradas bastas vezes utilizadas pelos práticos: *Tratado de Matéria Médica Homeopática*, de Vannier e Poirier e a *Matéria Médica* de William Boericke. Pontualmente, recorreremos ao *Dictionary of Practical Materia Medica* de Clarke.

Um Repertório Clínico, ainda que abreviado, pode constituir-se como um precioso auxiliar para os que se iniciam na arte de curar homeopática – aqui, não podemos deixar de aconselhar a utilização do *Receituário Homeopático – As doenças, seus sintomas e as receitas da medicina homeopática*, de John H. Clarke, Editorial Martins Fontes. No entanto, nada pode substituir a utilização do repertório homeopático na sua formulação kentiana, sugerindo à matéria médica a decisão do *simillimum* do paciente, como consequência da enumeração da totalidade sintomática.

Os remédios indicados em cada uma das rubricas, só irão agir no enfermo se houver uma correspondência senão perfeita, pelo menos de imperfeição relativa, entre a sua patogenesia e o quadro clínico e características específicas deste. A escolha do medicamento pressupõe a leitura das matérias médicas supramencionadas, para que o terapeuta atinja a similitude possível.

O estudo da maior parte dos remédios enunciados nas rubricas – *para efeitos de diagnóstico diferencial* – pode ser realizado neste site [www.homeoesp.org](http://www.homeoesp.org) em:

ARTIGOS » HOMEOPATIA » MATÉRIA MÉDICA DOS PRINCIPAIS MEDICAMENTOS, e

LIVROS ONLINE » MATÉRIA MÉDICA DOS PRINCIPAIS MEDICAMENTOS HOMEOPÁTICOS I e II.

Caso o medicamento não esteja online, poderá ser pesquisado no Google, no topo do menu, dirigindo o interessado para sites criteriosamente escolhidos.

Que o auxílio, bastas vezes precioso de um Repertório Clínico ou de um Índice Terapêutico, principalmente para os iniciados, não se transforme por indolência num instrumento de erro e negligência.
